SILVA BATTERIES

Our battery line-up gives you the opportunity to find the right balance between burn time and weight. The power range covers a wide span of activities, from a small head-mounted battery for a fast run to a powerful pack for a long hike. All rechargeable batteries are equipped with USB charging.

The **SILVA Connection System** enables you to use SILVA battery from 2008 and onwards. If the cable fits, it works.

The colder it gets the less battery capacity.
The battery capacity could depend on your body heat as well as the outside temperature. The long extension cord from SILVA gives you the option to carry the battery close to your body. This could be crucial in many ways. Keeping the battery as warm as possible in cold weather extends its burn time.
