TRANSFORMATION KIT OS

Transformation kit for 3-core PEX-insulated cables 12 - 36 kV

The kit is meant to be installed together with ProCab's single core cable terminations. Three core cables are transformed into single core cables and are to be considered as fully screened cables from the cable breakout to the lower part of the single core cable termination. This results in good flexibility and allows cores to cross each other as shown on the pictures.

In standard design the OS kit allows a core length of 0,7m from the cable breakouts to the lower part of the single core cable termination. If longer length are required this must be specified when ordering.

Each kit contains an installation instruction to cover installation of both OS kit and the cable termination.
The single core cable termination must be ordered separately.

Voltage kV	Conductor mm²	Name	El. no
12/36	25-240	OS for Control	11 316 58
		OS for TI/TO 12/24	11 316 59
		OS for CB / CC EASW - EASG	11 316 60
