

PRODUCT DATA SHEET

muffs

Description

Reduce or expand your conduits.

With Muffs, you can easily adapt conduit dimensions in your installation – whether you need to reduce or increase the size. They provide a smooth transition between different conduit sizes and help you optimize space where it is needed most. For example, by reducing a 50 mm conduit to 32 mm before the distribution board, you free up valuable space and achieve a more efficient and installer-friendly installation. If underground conduits do not fit as planned in bollards or charging stations, use Muffs to reduce them and create space for additional conduits.

Suitable for both flexible conduits and rigid PVC conduits (VP).

Available sizes

- 16-20 mm
- 20-25 mm
- 25-32 mm
- 32-50 mm
- 50-75 mm
